

Website Project Proposal – The Daily Grind Café

1. Organisation Overview

- Name: The Daily Café
- The Daily Café is a family-owned coffee shop that opened in 2019 in a small suburban shopping strip. Starting as a modest takeaway counter, it has grown into a sit-down café known for locally roasted coffee, fresh light meals, and a warm, community-focused atmosphere.
- Mission: To bring people together over honest, high-quality coffee and food, served with genuine hospitality in a welcoming neighbourhood setting.
- Vision: To become the community's go-to gathering spot, recognised for consistency, warmth, and support of local suppliers, while growing a loyal base of regular customers.
- Target Audience: Local professionals seeking a reliable coffee stop and workspace, students and freelancers who work remotely, and families and retirees in the surrounding area looking for a relaxing spot.

2. Website Goals and Objectives

Goals:

- Establish a professional online presence independent of social media.
- Enable customers to view the menu and place online orders for collection.
- Increase foot traffic by clearly communicating location, hours, and promotions.
- Build an email subscriber base for a monthly newsletter.

Key Performance Indicators (KPIs):

- Monthly unique website visitors (target: 800+ within 3 months of launch).
- Online order conversion rate (target: 8% of visitors placing an order).
- Newsletter sign-up rate (target: 5% of visitors).
- Average session duration and bounce rate, tracked via analytics.

3. Current Website Analysis

The Daily Café currently has no dedicated website and relies solely on a Facebook page and an Instagram profile.

Strengths:

- Active, engaged following on social media with regular photo posts.
- Consistent branding (logo and colours) already in use across social channels.

Weaknesses:

- No independent, searchable web presence, making the café harder to find via Google.
- Operating hours and menu pricing are often outdated or inconsistent across posts.
- No option for customers to pre-order or reserve a table online.
- Social platforms are not optimised for mobile browsing speed or accessibility.

Areas for Improvement: A dedicated, mobile-friendly website with an always-current menu, clear contact details, and an online ordering option would directly address each of these gaps.

4. Proposed Website Features and Functionality

- Homepage – hero image, tagline, opening hours, and quick links to menu and ordering.
- About Us – café story, sourcing philosophy, and team introduction.
- Menu Page – categorised food and drink listing with prices and allergen notes.
- Online Ordering – collection-order form with basic payment integration.
- Gallery – photos of the interior, food, and community events.
- Events/Blog – updates on live music nights, seasonal specials, and local partnerships.
- Contact Page – embedded map, phone number, email form, and social media links.
- Newsletter Sign-up – email capture linked to a mailing list tool.

5. Design and User Experience

Colour Scheme

Warm, earthy palette: coffee brown , cream, and pink to evoke a cosy, inviting feel.

Typography

A rounded serif (e.g., Lora) for headings to feel handcrafted and approachable, paired with a clean sans-serif (e.g., Open Sans) for body text to keep menus and instructions easy to read.

Layout and Design

A simple, single-column, mobile-first layout with generous white space, large food photography, and a persistent “Order Now” button in the navigation bar.

User Experience Considerations

- Simple top navigation limited to five items so customers are never more than one click from ordering.
- Menu items grouped by category (coffee, food, cold drinks) with photos to aid quick decisions.
- High colour contrast and readable font sizes for accessibility on mobile devices.

A low-fidelity wireframe was sketched for the homepage: a full-width header image and tagline at the top, followed by three feature blocks (Menu, Order Online, Our Story), a photo gallery strip, and a footer with contact details, opening hours, and social icons.

6. Technical Requirements

- Hosting: Shared hosting plan from a local South African provider (e.g., Afrihost or Xneelo) for reliable in-country server speed.
- Domain: A .co.za domain matching the café name, registered and renewed annually.
- Platform: WordPress CMS with WooCommerce for menu management and online ordering, allowing staff to update items without coding knowledge.
- Front-end: HTML5, CSS3, and JavaScript for custom theme styling and interactive elements.
- Security: SSL certificate for secure browsing and safe handling of order/payment data.

7. Timeline and Milestones

An eight-week timeline is proposed, aligned with the subject's submission schedule:

Phase	Milestone	Target Week
Discovery & Planning	Client brief confirmed, sitemap and content plan approved	Week 1
Design	Low-fidelity wireframes and colour/typography style guide signed off	Weeks 2–3

Development	Homepage, menu, ordering, and contact pages built and connected to CMS	Weeks 4–6
Testing & Refinement	Cross-browser, mobile, and usability testing; client review round	Week 7
Launch	Domain go-live, staff training, and post-launch monitoring begins	Week 8

8. Budget

The following budget estimate is based on typical small-business web project pricing in South Africa:

Item	Estimated Cost (ZAR)
Website design & development (once-off)	R12,000 – R18,000
Domain registration (.co.za, annual)	R150 – R250 / year
Web hosting (annual)	R1,200 – R2,400 / year
Online ordering / payment gateway setup	R2,500 – R4,000 once-off, plus per-transaction fee
Monthly maintenance & content updates	R500 – R900 / month
